

V Simpósio  
Internacional  
de **Tumores**  
**Gastrointestinais**

9 e 10 • agosto • 2019

HOTEL INTERCONTINENTAL SÃO PAULO

- ✓ Female, 52 y/o. ECOG 0
- ✓ Comorbidities: 2 previous meningioma resections
- ✓ Right flank pain for the last two weeks
- ✓ Palpable rapidly enlarging liver

- ✓ Started diagnostic work up in other hospital
- ✓ **CA 19.9: 324755 U/ml**
- ✓ **ColangiMRI:**
  - 3,5 x 2,0 cm pancreatic head mass
  - enlarged lymphnodes in the hepatic hilum, peripancreatic and retroperitoneum.
  - multiple hepatic nodules
- ✓ Pathology from liver biopsy: undifferentiated adenocarcinoma
- ✓ **NGS (from liver biopsy): no actionable mutation**

✓ **Female, 52 y.o., ECOG 0, pancreatic adenocarcinoma with high tumor load and in need for early response due to abdominal pain:**

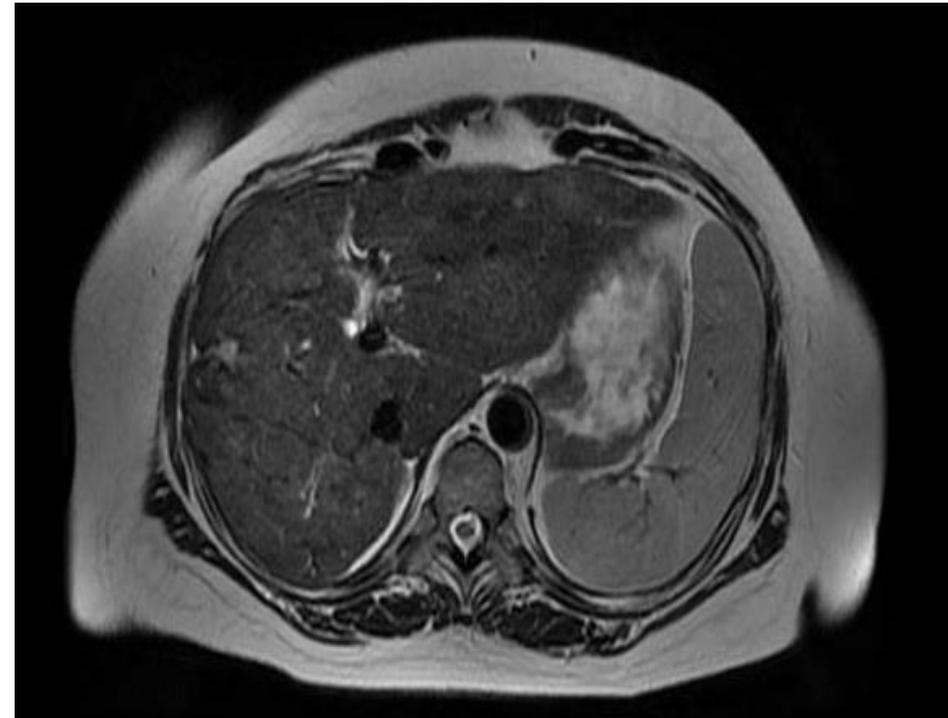

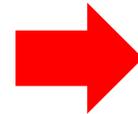

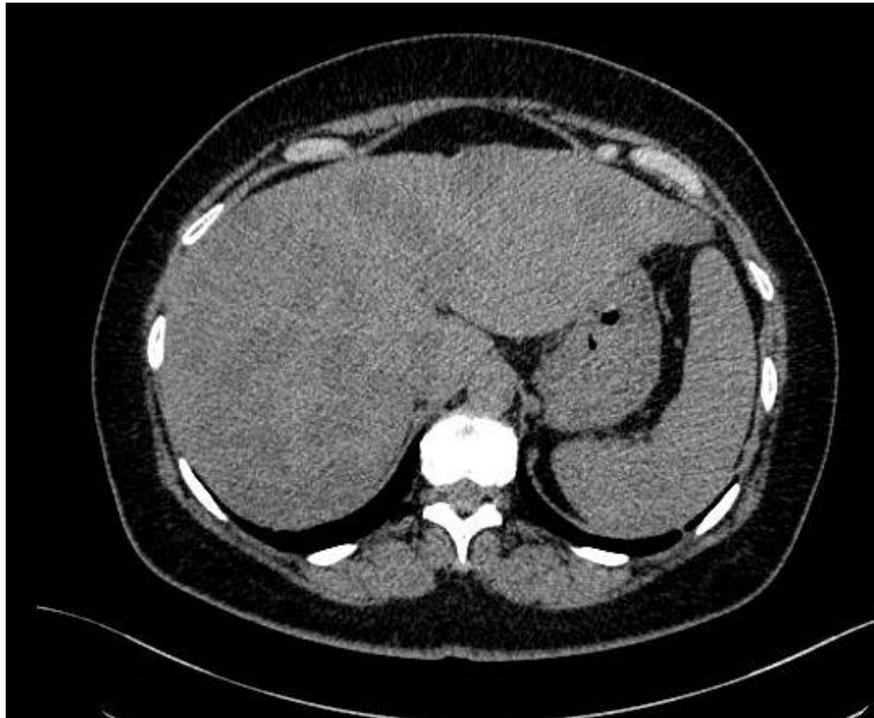

A. FOLFIRINOX

B. Gemcitabine and Nab-paclitaxel

C. Liver direct therapy (Ytrium? Chemoembolization?)

D. BSC

- ✓ **Started on FOLFIRINOX**
- ✓ No palpable liver after the first cycle
- ✓ Decrease of CA 19.9: 27
- ✓ After 12 cycles: **complete radiologic response in liver**

✓ **Complete radiologic response in pancreas**

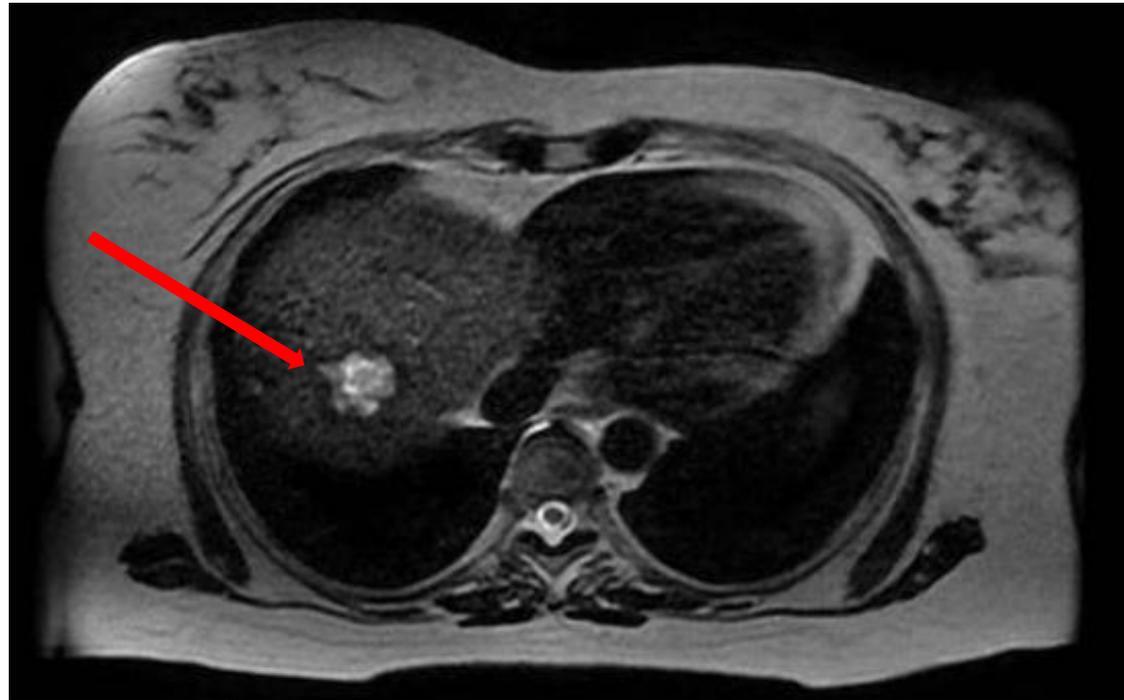

- ✓ Female, 52 y.o., ECOG 0, PDAC with high tumor load and in need for early response due to abdominal pain, with **complete response after 12 cycles of FOLFIRINOX:**

A. Mantain FOLFIRINOX

B. 5FU manteinance

C. Chemoholiday

- ✓ Patient decided to **stop chemotherapy** to travel (neuropathy grade 2)
- ✓ Increase in Ca 19.9: 82
- ✓ **Restaging after 2 months:**

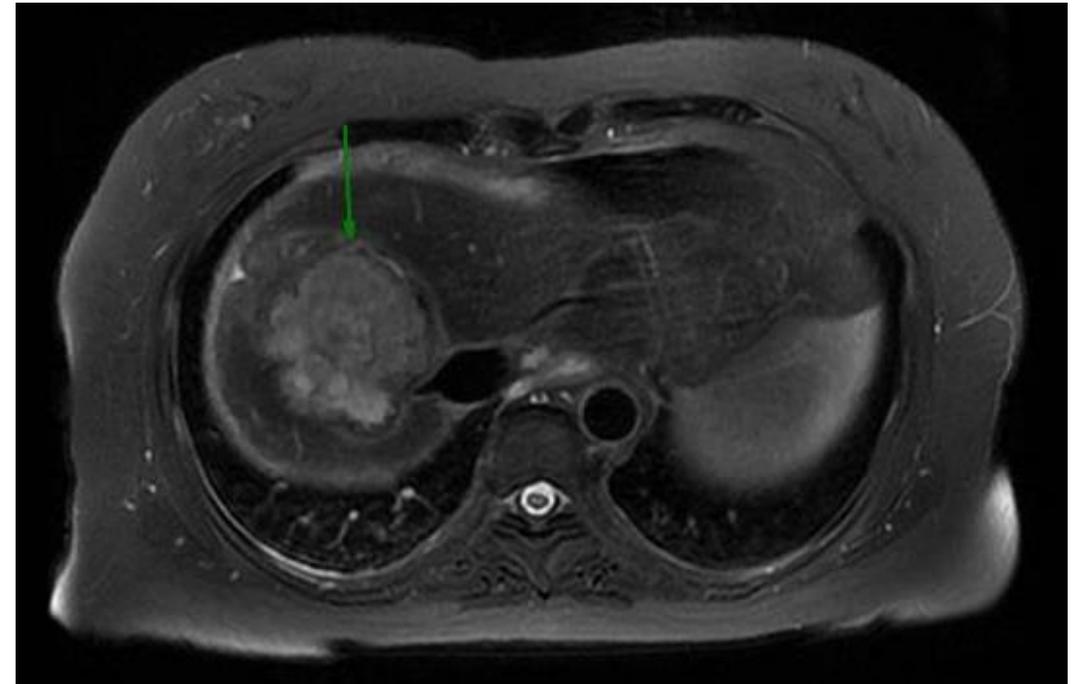

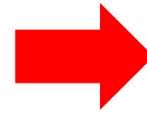

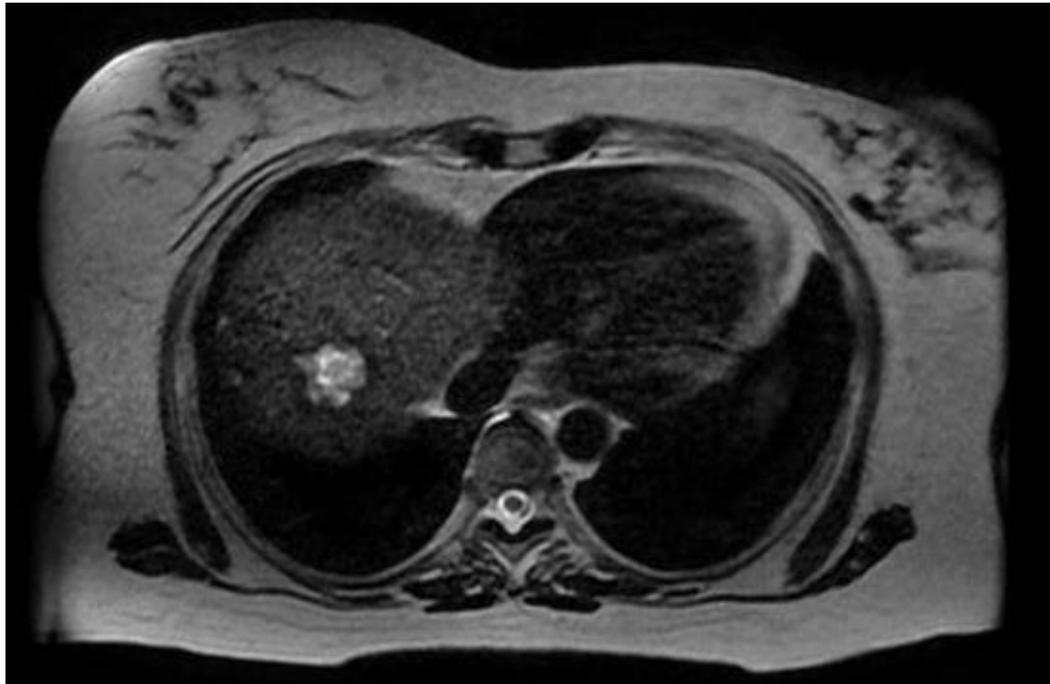

- ✓ **Only one 20mm hepatic lesion, no evidence of disease in the pancreas or lymphnodes**

✓ Female, 52 y.o., ECOG 0, PDAC with high tumor load and in need for early response due to abdominal pain, with complete response after 12 cycles of FOLFIRINOX and an **isolated 2cm hepatic lesion after 2 months off chemotherapy (and grade 1 residual neuropathy)**:

- A. Restart FOLFIRINOX
- B. 2nd line Gemcitabine plus Nab-Paclitaxel
- C. SBRT
- D. Resection

- ✓ Started 2nd line Gemcitabine plus Nab-paclitaxel
- ✓ After 2 months:

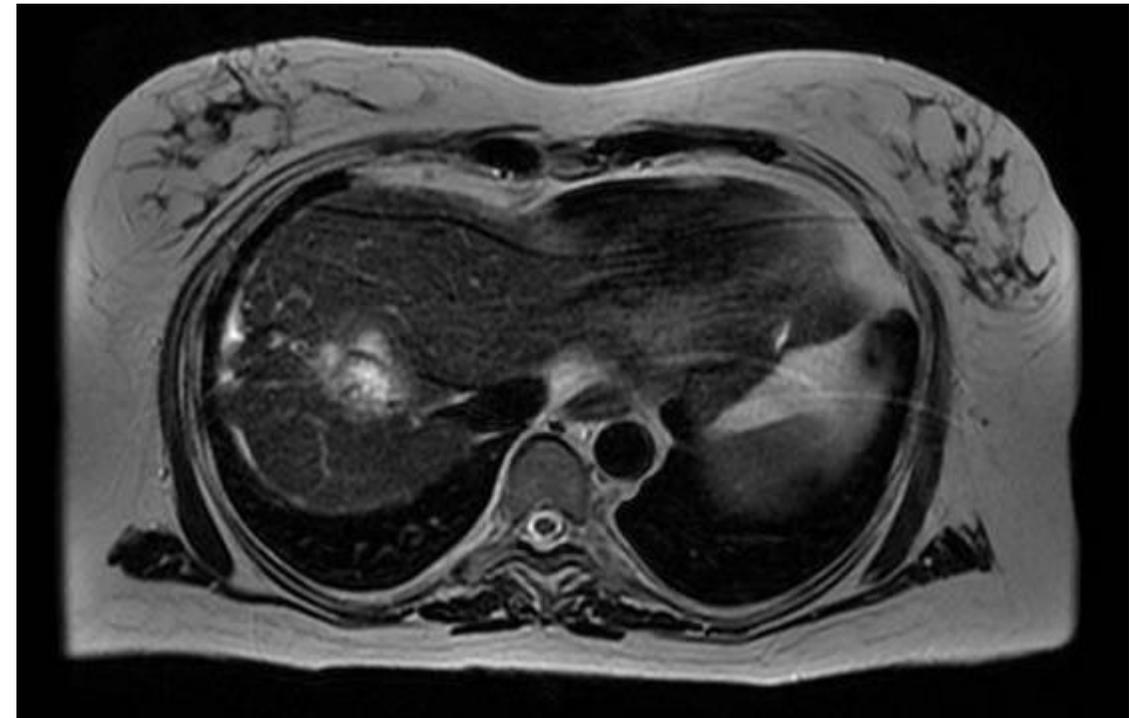

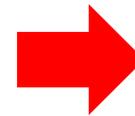

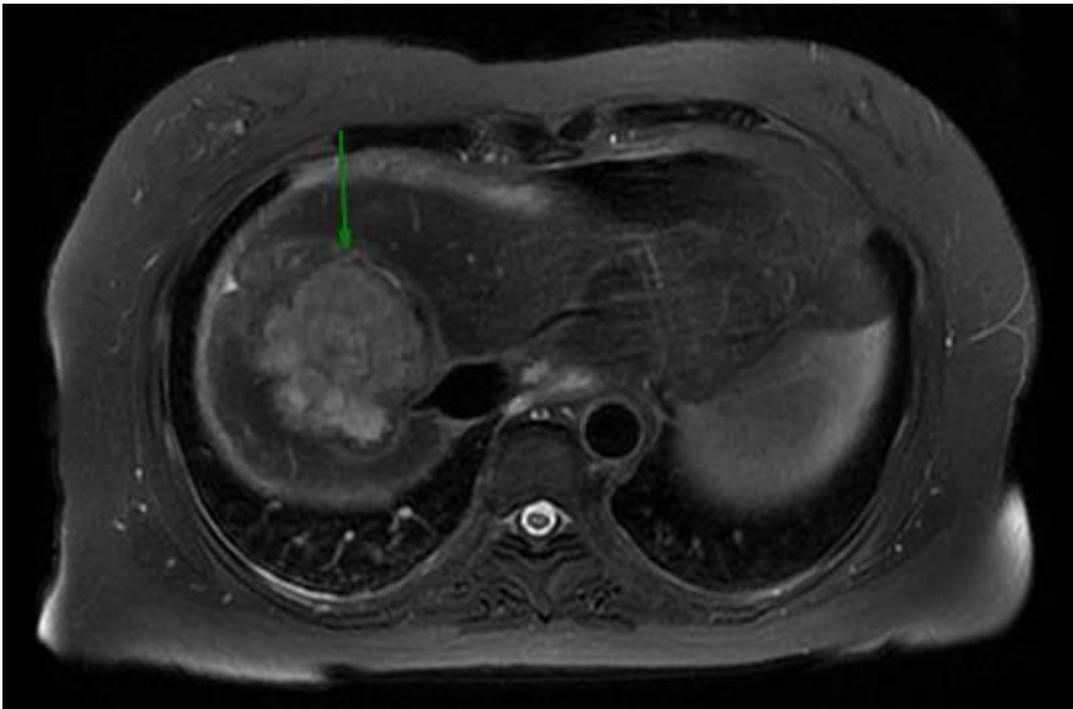

- ✓ **new progression** with 2 new hepatic lesions (~52mm) and an important growth of the known lesion. **Still no signs of disease in the pancreas or other sites**

- ✓ **Whats is your choice (ECOG 1):**
- A. FOLFIRINOX rechallenge
  - B. Third line FOLFOX
  - C. Local therapy (TACE? Yttrium?)
  - D. SBRT
  - E. Resection
  - F. BSC

✓ After discussion with the patient, she decided upon restarting  
**FOLFIRINOX**

✓ After 6 cycles: **partial response**

- ✓ Received FOLFIRINOX for 6 months in the 3rd line setting, after which had progressive disease and status performance loss
- ✓ BSC and deceased after 2 more months
